State Innovation Exchange

Multi-State Poll - Aggregate Analysis and Findings
July 2020
Survey Methodology

TargetSmart designed and administered this multimodal survey. Three-thousand five-hundred ninety-four interviews were conducted online among panelists who were matched to the TargetSmart voter file (3,594 weighted), 1,864 interviews were conducted online using text-to-web and email-to-web (422 email, 1,442 SMS) solicits from the TargetSmart voter file (1,825 weighted), and 300 interviews (379 weighted) were conducted via live phone calls (261 wireless, 39 landline). In total, the survey reached 5,758 adults (5,528 weighted), age 18 or older, who are registered to vote in one of the ten target states identified by State Innovation Exchange.

Quotas were designed to reflect the demographic and geographic distribution of registered voters in each target state. The data were weighted separately by gender, age, race, partisanship (party registration for states with party registration, TargetSmart Partisanship Score for states without party registration), TargetSmart High School Only Score, and a state-specific geography to ensure an accurate reflection of the populations in each target state.

The credibility interval (the theoretical margin of error for a blended-methodology poll that relies partially on telephone-based probability sampling, and partially on non-probability based online panel sampling) is +/- 1.3%. The margin of error for subgroups is larger and varies. Percentage totals may not add up precisely due to rounding.
Issue Environment and the Role of State Government
Voters Highly Pessimistic About Direction of the US; More Mixed, But Pessimistic on Net, About Direction of the State

Direction of the US and State

- **Right Direction**
- **Wrong Track**
